

Cambridge 2024

Quant workshop

Firm overview

- GSA was established in 2005 by Jonathan Hiscock
- We are currently around 160 people (25% research, 25% developers)
- Our headquarters are in London
- We trade all major asset classes in markets around the world

Systematic trading

- The main goal is forecasting returns using quantitative methods
- Systematic asset managers use algorithmic strategies that ingest data and send trades to follow patterns that have been profitable historically
- Systematic strategies can be extremely fast (sub-second) as well as slow (up to several months)

Research at GSA

Researchers at GSA face several challenges:

- Finding new data sources that contain “alpha”
- Building efficient frameworks for research/trading
- Portfolio optimisation
- Maintaining strategies

As a new researcher with GSA, you will collaborate with more experienced researchers on well-defined projects.
